AKNOWLEDGEMENT

The success and final outcome of the project report entitled "Estimation of ascorbic acid content in some citrus, non-citrus fruits and vegetables" required a lot of guidance and assistance from many people and I am extremely privileged to have got this all along the completion of my project. All that I have done is only due to such supervision and assistance and I would not forget to thank them.

I owe a deep of gratitude to my project guide Prof. Upasana Phukan for her constant encouragement, patient guidance and valuable supervision at every stage of my work. This work would not have been materialized at the present form without her incisive observations and intellectual directions in the course of time.

I take this opportunity to express my profound and sincere gratitude to 'Dibrugarh University' for providing me such project work as a part of syllabus.

I consider myself proud to be a part of this institution which stood by my way in all possible way.

I take this opportunity to acknowledge the timely support and help rendered by Dr. Rupali Gogoi (HOD of Zoology Department) and other teaching and non-teaching staff of the department in completion of my project.

In this limited space, it is simply impossible to give the names of large numbers of friends and well-wishers who provided invaluable cooperation whose direct or indirect help assisted me in carrying out this project in every possible way. I am personally obliged and highly grateful to all those people.

In my desire to write this report, I have in no way any claim to come out with a perfect piece of work. Thus, I remain open to all criticisms and suggestions which could present me with new sources of inspiration as I develop in my ability to research and learn.
