“The Study of Medicinal Plants of Borguri and its vicinity of Tinsukia district, Assam”

by Nilutpal Boruah

Medicinal plants have been utilized as a part of essentially all societies as a wellspring of medicine. Affirmation of the security, quality, and adequacy of therapeutic plants and natural products has now turned into a key issue in industrialized and in developing nations. The across the board utilization of home grown cures and healthcare preparations is depicted in the Vedas and the Bible. Medicinal plants have been utilized for a large number of years to flavor and preserve food, to treat wellbeing issue and to avoid illnesses including epidemics. The information of their healing properties has been transmitted throughout the hundreds of years within and among human groups.

Acknowledgement

At first I would like to thank Dr. A.B. Gogoi, Assistant professor of Tinsukia College, Tinsukia for giving facilities in herbarium and advice regarding in this field in the preparation and completion of this project.

Also thankful to local medicine men inhabitants of Borguri for their support and helping hand during the study period, without their support the present study would not have been possible to bring out successfully.

Nilutpal Boruah,

Preface

People from ancient time is using plants as medicine in various common ailments. Our ancient literature also provide the information of using plants as medicine. About 90% of all are medicinal. But the drug which actually cure a disease is obtained frm a particular part of a plant such as stem, leaves, root etc.

Although now a days in every stage of our life style depend upon technology, yet some of us in some places depend upon the natural things. In curing disease almost 90% people believe in medicinal plant directly or indirectly as some valuable drugs are made up of such plants and some people directly use the plants as medicine.

Therefore to aware the growing new generation I take a step forward to study about the medicinal property of various plants around us.

Coriandrum sativum

Ageratum conyzoides

Spilanthus acmella

Allamanda nerifolia

Plantago major

Amaranthus spinosus

Mirabilis jalapa

Tagetes patula
